

SHADI ALKEESH

Python Developer & Full Stack Developer

+972 544811751 | shadikeesha@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFILE

Python and Full Stack Developer with hands-on experience building scalable web applications and AI/NLP systems. Skilled in clean code, responsive UIs, and cross-functional collaboration. Completed a dual B.Sc. in Software Engineering and Applied Mathematics.

EDUCATION

Braude College of Engineering — B.Sc. in Software Engineering and Applied Mathematics | 2021–2026 | GPA: 85

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C, C#, Java, MATLAB

Frontend: React, Next.js, Tailwind CSS, Vite, Vanilla JS

Backend & Data: Node.js, MongoDB, Data Structures & Algorithms

AI / NLP: BERT, Deep Learning, Sentiment Analysis, NLP, Statistical Analysis

Other: Linux, Grafana, Image Processing, Kubernetes, Cryptography, Agile, Git

EXPERIENCE & PROJECTS

Deep Learning Project — Arabic Sentiment Analysis using BERT

- Built a binary sentiment classifier for Arabic text using a fine-tuned BERT model; handled full data pipeline (collection, cleaning, tokenization, labeling).

SocialChange Detection in Arabic Discourse(XPlatform)—DeepLearning&NLP

- Designed a data-driven NLP system to detect social/political shifts in Arabic Twitter data using N-grams, Feature Selection, Mean Rank Dependency, ZVT, and PAM clustering to identify temporal windows linked to major transformations.

EduBridge — International Student Transition Web Platform

- Developed a full-stack platform with user auth, cross-cultural comparison tools, and a curated resource library; built with Vite, Tailwind CSS, and react..

Generating Images with Diffusion Models — TensorFlow & Google Colab

- Deployed a Stable Diffusion text-to-image pipeline (KerasCV) on a T4 GPU with mixed-precision and XLA compilation, reducing inference to ~10–20s/image while preventing OOM errors via memory growth management.

AgriVision — AI-Powered Plant Monitoring Platform

- Built a cloud app for real-time plant health monitoring using IoT sensors, Firebase, and a dual-microservice backend; integrated a Gemini-powered RAG chatbot, automated health alerts, gamification rewards, and a live sensor dashboard.

Hearing Image Textures Through the Laplacian Spectrum

- Modeled images as weighted graphs and computed the Graph Laplacian spectrum to classify textures (smooth vs. stochastic); extended to a Spectral-MLP hybrid evaluated on the 5,640-image DTD dataset with 10-fold cross-validation.

LANGUAGES

Arabic: First Language | Hebrew: Proficient (C2) | English: Proficient (C2)
